

HAWKSOFT 6 RELEASE NOTES

Released 04/03/2025

Category	Type	Release Notes
Activity Tags	Enhancement	When finalizing a log, you may now search for activity tags to add.
Agency Setup	Enhancement	Added ability to filter office list in Agency Setup by Description, Name, Address, City, State, Zip.
Downloads	Bug	Fixed issue with Cancellation downloads not properly updating the policy.
CMS	Enhancement	Added the network domain a workstation belongs to in the System Info dialog. Agencies can use domain information to configure access to HawkSoft via the Domain Access security feature.
Correspondence	Bug	Corrected an issue that could cause locations to continue showing on correspondence templates after they had been removed from the client/policy.
CMS	Bug	Merging clients will no longer fail if a policy from the source client had previously been moved to the target client. Instead, policies that were previously moved will be skipped. Added additional messaging at the end of a client merge so users are aware.
Email	Bug	Fixed issue with very large email chains not launching in a timely fashion or appearing in the Log properly after Forwarding or Replying.
